                                                                                                                                                                                          CC protein) receptor contain a cysteine rich domain, and are used for chihibiting ztnf4 activity. Ztnf4 is a TNF ligand. They may also be used CC for inhibiting BR43X2, TACI or BCMA receptor-ligand engagement associated CC with activated or resting B lymphocytes, effector T-cells, or with cC antibody production. The antibody production is associated with an . CC autoimmune disease selected from systemic lupus erythematosus, myasthenia CC gravis, multiple sclerosis and rheumatoid arthritis. The ztnf4 activity CC and BR43X2, TACI or BCMA receptor-ligand engagement is associated with CC asthma, bronchitis, emphysema, end stage renal failure, CC glomerulonephritis, vasculitis, nephritis, pyelonephritis, renal CC neoplasms, multiple myelomas, lymphomas, light chain neuropathy, CC amyloidosis, moderating immune response, immunosuppression, graft cersus host disease, joint pain, swelling, anaemia, or CC septic shock. BR43X2, TACI, and BCMA polypeptides, fusions, antibodies, CC agonists or antagonists can be used to treat hypertension, renal artery CC stenosis, or occlusion, and cholesterol or renal emboli.
                                                                                Matches
                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents a human BCMA protein, a B cell protein related to transmembrane activator and CAML-interactor (TACI) receptor TACI is a tumour necrosis factor (TNF) receptor. The extracellular domains of BR43x2 (an isoform of TACI), TACI or BCMA (a related B cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Inhibiting ztnf4 activity in a mammal, to treat autoimmune diseases, renal disease, graft versus host disease, and inflammation, comprises administering a BR43x2, TACI or BCMA extracellular domain polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; Page 152; 175pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to methods of using one or more agonists or antagonists to modulate the activity of the members of TNF (tumour necrosis factor) especially TALL-1, APRIL and TNF receptor (TNFR) e.g. TACI or BCMA. The method is useful for treating pathological conditions or diseases associated with increased TALL-1 and APRIL expression or activity. TALL-1 and APRIL antagonists are used to block the interaction between APRIL and TALL-1 with TACI or BCMA. They are useful for treating a mammal suffering from cancer such as loukaemia, lymphoma, myeloma, cancers of lung and colon and autoimmune diseases e.g. rheumatoid arthritis, multiple sclerosis.
                                                                                                                                                                                                                                                                                                  gene therapy; cancer; nephrotropic; renal disorder; autoimmune disease; carcinoma; lung; colon; breast; prostate; Grave's disease; hypertension; systemic lupus erythematosus; SLE; inflammation; cardiovascular disease; B-cell lympho-proliferative disorder; BCM; immunosuppressive disease; organ transplantation; HIV; human immunodeficiency virus; TNF; tumour necrosis factor; BCMA; B cell maturation protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Inhibiting or neutralizing TALL-1 or APRIL polypeptide biological activity, for treating autoimmune disorders and cancer, comprises exposing the cells to TALL-1 or APRIL polypeptide agonists or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         as BCMA) protein, or a BAFF-R fusion protein as an agent for the treatment of a variety of immune-related disorders. BAFF-R is a member of the TWF (tumour necrosis factor) family, acting as an immunoregulatory agent, and also plays a role in the development of hypertension and related disorders. BAFF-R, fusion proteins containing it, and BAFF-R, specific antibodies can be used for inhibiting B-cell growth, dendritic cell-induced B-cell growth and maturation, and immunoglobulin production, and in the treatment of autoimmune disorders. B-cell lymphoproliferative disorders, hypertension and renal disorders. The BAFF-R proteins may also be used in the treatment of immunosuppressive disorders and HIV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Innibiting dendritic cell-induced B-cell growth, maturation and B-cell lympho-proliferative disorder by administering BAFF-receptor polypeptide, chimeric molecule comprising receptor or anti-BAFF-R antibody homolog .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       infection, and in patients undergoing organ transplantation. The BAFF-R proteins or BAFF-R specific antibodies may be used for treating, suppressing or altering an immune response involving a signalling pathway between BAFF-R and BAFF, thereby inhibiting inflammation. Since BAFF-R inhibits B-cell growth and maturation it is useful for treating diseases such as systemic lupus crythematosus, autoimmune haemolytic anaemia suppression in the suppression of the systemic lupus crythematosus, autoimmune haemolytic anaemia suppression in the suppression of the systemic lupus crythematosus, autoimmune haemolytic anaemia.
                                                                                             Human: Tumour Necrosis Factor; TNF; immunosuppressant; TALL-1; Tumour necrosis factor and ApoL-related Leucocyte expressed Ligand 1; therapy; autolimmune disorder; rheumatoid arthritis; multiple sclerosis; systemic lupus erythematosus; SLE; insulin dependent diabetes mellitus;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         human BAFF-R may be used in gene therapy to treat tumours, lymphomas, autoimmune disorders and inherited B-cell-associated disorders. TALL-1 protein is useful for identifying compounds that regulate B lymphocyte proliferation. It is also useful for treating B lymphocyte associated autoimmune disorders like rheumatoid arthritis, systemic lupus erythematosus (SLE), insulin dependent diabetes mellitus, multiple sclerosis, myasthenia gravis, Grave's disease, mellitus, multiple sclerosis, myasthenia gravis, Grave's disease,
                                                                                                                                                                                                                                                                                         autoimmune haemolytic anaemia, autoimmune thrombocytopenia purpura, Goodpasture's syndrome, pemphigus vulgaris, acute rheumatic fever, post-streptococcal glomerulonephritis, or polyarteritis nodosa. The TALL-1 protein and its corresponding nucleic acid sequence are
                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to Tumour necrosis factor (TNF) and ApoL-related Leucocyte expressed Ligand 1 (TALL-1) nucleic acid molecules, proteins (including homologues), and their antibodies. The invention in particular relates to methods for regulating the interaction between TALL-1 and TALL-1 receptors (BCMA referred as B cell

The present invention describes a human tumour necrosis factor receptor CC designated Enfr12 (I). (I) has cytostatic, immunosuppressive, designated Enfr12 (I). (I) has cytostatic, immunosuppressive, CC dermatological, antinflammatory, neuroprotective, antidiabetic, and hypotensive CC entirities, and can be used in gene therapy. (I) can be used for CC (e.g. 2004), for treating disorders and disease associated with BCC (e.g. 2004), for treating disorders and disease associated with BCC lymphocytes, activated B lymphocytes or resting B lymphocytes, and for CC (e.g. 2004), for treating disorders and disease associated with BCC lymphocytes, activated B lymphocytes or resting B lymphocytes, and for CC (e.g. 2004), for treating disorders and disease mellitus, and for CC (e.g. 2004), for treating CC (e.g. 2004), for conclusion and disorders such as systemic lupus erythematosus, myssthenia (CC (e.g. 2004), for conclusion and gomerulonephritis, vasculatis, chronic lymphoid CC (e.g. 2004), for conclusion, and polonephritis, and for treating renal failure (CC (e.g. 2004), for explones, lymphomas, light chain neuropathy, or CC (e.g. 2004), for modulating the immune system, for regulating B cell responses and CC (e.g. 2004), for modulating the immune system, for regulating B cell responses and CC (e.g. 2004), for modulating and B cell communication. The present sequence represents a protein which is given in the exemplification of the present invention.

                                                                           CC protein (BCMA) activity in a mammal. The method comprises administering CC a specific binding partner for April (G70, a tumour necrosis factor TNF femily ligand), having the consensus region of TACI, BCMA, or the TACI/CC BCMA extracellular consensus sequence, but not the extracellular region CC of TACI or BCMA. The method is useful for inhibiting activity of TACI CC and/or BCMA in a mammal which is useful for treating B-cell or TACI CC appropriate at the disorders, one or more solid tumours such as lung, CC gastrointestinal, pancreatic or prostate tumour. APRIL, BCMA and TACI CC diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic cdisease), drug and insect sting allergy, inflammatory bowel disease (Crohn's disease, colitts), scleroderma, autoimmune disease (multiple cselerosis, rheumatoid arthritis, systemic lupus crythematosus), fungal, CC bacterial, protozal and viral infections (HTV), atherosclerosis, cancer with leucocyte infiltration of the skin or organs. The present sequence cc is human BCMA protein-immunoglobulin Fc region fusion protein.

The invention relates to a method of treating a mammal for a condition associated with undesired cell proliferation such as cancer or carcinoma. The method involves administering a composition comprising A proliferation Inducing Ligand Receptor (APRIL-R) also referred as B cell maturation protein (BGM or BCMA) antagonist that antagonises the interaction between APRIL and its cognate receptor(s). This method is useful for treating undesired cell proliferation such as cancer or carcinoma e.g. human lung carcinoma, colon carcinoma, breast carcinoma, prostate carcinoma, and other carcinomas whose proliferation is modulate by APRIL. It is also useful for treating autoimmune diseases (Grave's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAE00507 standard;

APRIL-R DNA is also useful in gene therapy. The present sequence is a fusion construct containing human APRIL-R also referred as BCMA or BCM protein, Fc region of human immunoglobus G (IGG) and a signal sequence from murine Ig kappa cDNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                and in the treatment of autoimmune disorders, B-cell lymphoproliferative disorders, hypertension and renal disorders. The BAFF-R proteins may also be used in the treatment of immunosuppressive disorders and HIV infection, and in patients undergoing organ transplantation. The BAFF-R proteins or BAFF-R specific antibodies may be used for treating, suppressing or altering an immune response involving a signalling pathway between BAFF-R and BAFF, thereby inhibiting inflammation. Since BAFF-R inhibits B-cell growth and materials it is useful for treating diseases such as systemic lupus crythematosus, autoimmune haemolytic anaemia, crapidly disease, multiple mysloma, B-cell carchomas, leukaemia, rapidly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       the TNF (tumour necrosis factor) family, acting as an immunoregulatory agent, and also plays a role in the development of hypertension and related disorders. BAFF-R, fusion proteins containing it, and BAFF-R specific antibodies can be used for inhibiting B-cell growth, dendritic cell-induced B-cell growth and maturation, and immunoglobulin production.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cytostatic; B cell maturation protein; BCMA; tumour necrosis factor; TNF; tymphoproliferative disorder; tumour; lung; gastrointestinal; pancreatic; prostate; inflammation; immune disorder; diarrhoea; psortasis; colitis; drug allergy; dermatitis; pneumonia; asthma; inflammatory bowel disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human B cell maturation protein cysteine rich extracellular region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       progressive glomerulonephritis, and lymphomas. Nucleic acids encoding human BAFF-R may be used in gene therapy to treat tumours, lymphomas, autoimmune disorders and inherited B-cell-associated disorders. The present sequence represents the BAFF-R fusion protein BAFF-R-FC, comprising a mouse IgG-kappa signal sequence, residues 1-153 of human BAFF-R and a human IgG Fc sequence.
Inhibiting activity of B cell maturation protein and/or transmembrane activator and intracellular cyclophilin ligand interactor, by administering a binding partner for APRIL, a tumor necrosis factor
                                                                                                                                                                                                              Theill LE,
                                                                                                                                                                                                                                                                                                                                                                        12-MAY-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         BCMA extracellular consensus sequence, but not the extracellular region of TACI or BCMA. The method is useful for inhibiting activity of TACI or BCMA. The method is useful for treating B-cell or TACI or BCMA in a mammal which is useful for treating activity of TACI clamboprolliferative disorders, one or more solid tumours such as lung, gastrointestinal, pancreatic or prostate tumour. APRIL, BCMA and TACI antagonists are useful for treating inflammation and immune function diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic dermatitis, respiratory allergic disease, (asthma, hypersensitivity lung disease), drug and insect sting allergy, inflammatory bowel disease (Crohn's disease, colitis), scleroderma, autoimmune disease (multiple sclerosis, rheumatoid arthritis, systemic lupus erythematosus), fungal, bacterial, protozoal and viral infections (HIV), atherosclerosis, cancer with leucocyte infiltration of the skin or organs. The present sequence is human BCMA cysteine-rich extracellular region.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a method for inhibiting TACI (transmembrane activator and intracellular CAML interaction) and/or B cell maturation protein (BCMA) activity in a mammal. The method comprises administering a specific binding partner for APRIL (G70, a tumour necrosis factor-TNF family ligand), having the consensus region of TACI, BCMA, or the TACI/

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         protein (BCMA) activity in a mammal. The method comprises administering CC a specific binding partner for APRIL (G70, a tumour necrosis factor TNF CC family ligand), having the consensus region of TACI. BCMA, or the TACI/CC BCMA extracellular consensus sequence, but not the extracellular region CC of TACI or BCMA. The method is useful for inhibiting activity of TACI CC and/or BCMA in a mammal which is useful for treating becell or T-cell CC lymphoproliferative disorders, one or more solid tumours such as lung CC lymphoproliferative disorders, one or more solid tumours such as lung CC gastrointestinal, pancreatic or prostate tumour. APRIL, BCMA and TACI CC antagonists are useful for treating inflammation and immune function CC dermatitis, respiratory allergic disease, allergies, pneumonia, atopic CC desases, drug and insect sting allergy, inflammatory bowel disease (multiple CC sclerosis, rheumatoid arthritis, systemic lupus erythematosus), fungal, CC sclerosis, rheumatoid arthritis, systemic lupus erythematosus), fungal, with leucocyte inflammations (HrV), atherosclerosis, cancer CC with leucocyte inflammations (HrV), atherosclerosis, cancer

CC as BCMA) protein, or a BAFF-R fusion protein as an agent for the TNF (tumour necrosis factor) family, acting as an immunoregulatory cagent, and also plays a role in the development of hypertension and created disorders. BAFF-R is a member of the TNF (tumour necrosis factor) family, acting as an immunoregulatory cagent, and also plays a role in the development of hypertension and created disorders. BAFF-R, fusion proteins containing it, and BAFF-R cospecific antibodies can be used for inhibiting B-cell growth, dendritic call-induced B-cell growth and maturation, and immunoglobulin production. Cand in the treatment of autoimmune disorders, B-cell lymphoproliferative disorders, hypertension and renal disorders. The BAFF-R proteins may also be used in the treatment of immunosuppressive disorders and HIV infection, and in patients undergoing organ transplantation. The BAFF-R proteins or BAFF-R specific antibodies may be used for treating, compressing or altering an immune response involving a signalling pathway between BAFF-R and BAFF-R thereby inhibiting inflammation. Since BAFF-R conhibits B-cell growth and maturation it is useful for treating diseases such as systemic lupus erythematosus, autoimmune haemolytic anaemia, cardiagenessive disease, multiple myeloma, B-cell carcinomas, leukaemia, rapidly progressive disease, multiple myeloma, B-cell acrcinomas, leukaemia, rapidly chuman BAFF-R may be used in gene therapy to treat tumours, lymphomas, accorders. The accomposers and inharited B-cell-associated disorders. Brechenge as accorded to the composition of the second content accorders and inharited B-cell-associated disorders.

antibody homolog -
                                                                                                                                                          present sequence represents a human BAFF-R protein sequence as encoded
by plasmid PJST535. However, this BAFF-R protein sequence is 27 amino
acids shorter than that given in AAB60698.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Thompson
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to the use of a BAFF receptor (BAFF-R, also known
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Example 1; Fig 3; 59pp; English.

Natl. Acad. Sci. U.S.A. 97:9156-9161(2000).

FUNCTION: Receptor for TNFSF13B/BLYS/BAFF and TNFSF13/APRIL.

Promotes B-cell survival and plays a role in the regulation humoral immunity. Activates NF'-Kappa-B and JNK.

SUBUNIT: Associates with TRAF1, TRAF2, TRAF3, TRAF5 and TRAF subcellular Location: Type III membrane protein. Plasma memb and perinuclear Golgi-like structures.

TISSUE SPECIFICITY: Expressed in mature B-cells, but not in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DISEASE: A FORM OF T-CELL ACUTE LYMPHOBLASTIC

Proprotein convertase subtilisin/kexin type 5 precursor (EC 3.4.21.-)
(Proprotein convertase PC5) (Subtilisin/kexin-like protease PC5)
(Convertase PC5) (PC6) (Subtilisin-like proprotein convertase 6)
                                                                                         "Murine subtilisin-like proteinase SPC6 is expressed during embryonic implantation, somitogenesis, and skeletal formation.";
Dev. Genet. 21:75-81(1997).
-I- FUNCTION: LIKELY TO REPRESENT A WIDESPREAD ENDOPROTEASE ACTIVITY WITHIN THE CONSTITUTIVE AND REGULATED SECRETORY PARHWAY. CAPABLE OF CLEAVAGE AT THE RX(K/R)R CONSENSUS MOTIF. MAY BE RESPONSIBLE FOR THE MATURATION OF GASTROINTESTINAL PEPFIDES. MAY BE INVOLVED IN THE CELLULAR PROLIFERATION OF ADRENAL CORTEX VIA THE ACTIVATION.
                                                                                                                                                                                                                                                                                                                                                                                                Bendayan M., Seldah N.G.;
